Summary

Full-stack developer, three years shipping products people use: a stablecoin payments app live on the App Store and Google Play, DeFi infrastructure running on mainnet, and developer tooling that reached #3 on Product Hunt, some of it open source. Comfortable from React Native and Next.js down to Node.js services, Docker and deploys.

Experience

Full Stack Developer, PayFlip 2026 – present Live | App Store | Play Store | GitHub
React Native (Expo), Next.js, TypeScript, Redux, Wagmi, Viem, ERC-7702, Redis, Docker, Nginx, GitHub Actions

- **Shipped the React Native (Expo) app to both the App Store and Google Play**, building onboarding, wallet, and send and receive flows on stablecoin rails.
- Integrated **ERC-7702 account abstraction** (Alchemy Account Kit, Wagmi, Viem) for gasless transactions with SIWE sign-in and no seed phrases to manage.
- Built multi-chain transfer flows across Ethereum, Base, Polygon and Arbitrum, with escrow-backed settlement that clears only on on-chain confirmation.
- Set up the release pipeline end to end: store builds and submissions, CI on GitHub Actions, crash reporting, and production fixes.
- Built the Next.js site and account tooling (waitlist, docs search, Privy self-service deletion) fronting the Node.js payments API.

Full Stack Developer, Surge (syv-labs) 2024 – 2026 SurgeDeFi | ContextPool | FixMyAI | GitHub
Next.js, Node.js, Rust (Axum), TypeScript, Redux, Solidity, ethers.js, GraphQL, The Graph, MCP, Docker, Nginx, Prometheus/Grafana

SurgeDeFi

- Built the frontend for AMM liquidity pools and gas-efficient swaps via ethers.js, running across **two EVM chains and live on XRPL-EVM mainnet**.
- Migrated a legacy React (Node.js 14) codebase to Next.js on Node.js 20, and built a pull-based oracle with deployed **subgraphs** indexing on-chain events into the UI.

ContextPool

- Built a **Rust** CLI that parses IDE session transcripts, summarizes them with an LLM and stores insights in SQLite, giving AI coding agents persistent memory over **MCP; reached #3 on Product Hunt**.
- Built the MCP server (fetch, search, list) over those insights, plus a Rust/Axum sync backend and Next.js dashboard; redacted API keys and tokens at intake before anything reached an LLM.

Full Stack Developer, Minisoft Business Solutions 2023 – 2024 GitHub | BREX
React, Node.js, Express, Solidity/EVM, Bootstrap, Axios, GitHub Actions

- Integrated the EVM contracts behind **BREX** on the BharatBZ platform, splitting real estate, gold and private equity assets into fractional units, and built the investor flows for browsing, buying in and tracking a portfolio.
- Built the responsive React and Bootstrap UI and integrated multiple third-party APIs via Axios.
- Cut time-to-first-byte and largest-contentful-paint by moving data fetching off the client, adding route-level code splitting, and serving properly sized and compressed images.

Skills

Frontend: React, Next.js, React Native (Expo), TypeScript, JavaScript, Redux, Tailwind CSS

Backend & Data: Node.js, Express, Rust (Axum), PostgreSQL, Redis, SQLite, GraphQL, MCP servers, CLIs

Web3: Solidity, ethers.js, Wagmi, Viem, ERC-7702, The Graph (subgraphs)

Tools & DevOps: Git, GitHub Actions, Docker, Nginx, Sentry, Prometheus/Grafana, VPS self-hosting

Projects

Growix | Personal Growth PWA | *Next.js, PostgreSQL, Docker* GitHub | Live
Installable, offline-capable PWA for habits, plans and learning; Next.js on PostgreSQL, containerized with Docker and self-hosted on my own VPS.

Education

B.Tech, Computer Science, Shri Vaishnav Vidyapeeth Vishwavidyalaya

CGPA 7.83 / 10
